

# HANGING BASKET PLANTS

## WATERING IN HOT WEATHER GUIDE

Check your basket soil. It may seem dry on top but if the roots are still moist then you don't need to water for as long

If it is windy, take your baskets down as they will dry out much quicker and require more watering

Take baskets out of the sun in really hot weather

Even 2 days without water can reduce the chance of your bedding plants surviving

Water early mornings or early evening. Watering late at night means your basket plants may sit in too much water

**TOP TIP:**

*Always ask one of our plant experts to help you choose the right plant for the right location in your garden.*
